

Services: Technology

Design
Accessibility
Consultancy

Development services are provided either independently or as a part of the design, build and implementation phases when part of an on-IDLE solution.

Development services are quoted on the output from a consultancy exercise (project scoping). Development services always have an associated project specification that serves as the route-map to the final product -developed by you, the customer, and on-IDLE in partnership. All technology development is driven by design and the end-user requirements.

Development services offered are:

- Scoping
- Search Engine Optimisation (SEO)
- Systems architecture design
- Programming (CSS, xHTML, PHP, AJAX, XML, XSLT, ActionScript)
- Site content population
- Content Management System build (CMS - Open Source)
- Database set-up and build
- Shopping cart build and e-Commerce integration
- Implementation and testing
- Usability and Accessibility implementation
- Maintenance

Content management systems (CMS)

We develop using Open Source frameworks with our in-house highly customisable CMS, oi-Core© being an adapted version of the CakePHP

framework.

Typical CMS modules that are customised to your requirements include:

- Multi-Lingual web content publishing
 - Image library
 - Text editing and workflow-based publishing
 - Events calendar (with tagging and categories)
- Blog (with tagging, commenting and categories)
 - Banner advertising engine
 - Guest book and forum
 - Automated email notification
 - Product catalogue
 - Archive (documents)
 - Media (press releases, media coverage)
 - HTML Email Newsletters & subscriber database
 - News
 - News tickers or feeds
- Dynamic PDFs
 - Drop-box secure data storage systems
- Fine grain and secure user access control
- Sales figures / subscriber data with .xls export
